

Customer

Marva Parken

Scope

Renewal of all utility applications
on camp site

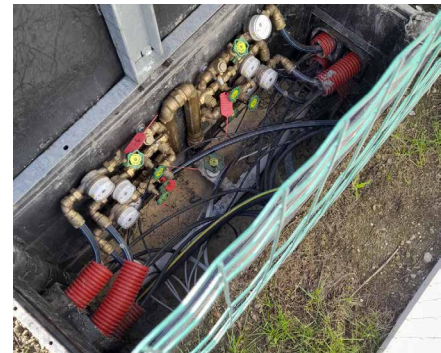

CHALLENGE

Marva Parken in Middelkerke had to renew utility applications throughout their camping sites at the Belgian coast. Installation had to be carried out fast, with as little space requirements as possible and without having to move camping houses temporarily.

SOLUTION

- Inspection chambers for every 8 caravans/mobile homes were installed. It's an easy way to provide the distribution of water, TV signals over coax, UTP for internet, electricity, and earthing cabling.
- All the inspection chambers are accompanied by a footpath cabinet for individual electricity meters.
- The water consumption meters are installed in the inspection chambers.
- The project will continue the coming years to renew all the utilities infrastructure over the 3 existing camping sites.

SUM UP

- With a combination of Multiduct, Access chambers and Cabinets, Marva Parken succeeded to renew old utility infrastructure without the need to move camping houses temporarily, meaning there was no disruption for their customers.
- Installation time and space savings were the differentiating factors to convince the customer to use our Cubis Multiduct cable protection system.

**Renewal of all utility applications
on camp site – we have the solution!**

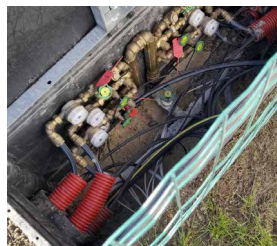

Camping owners can sleep comfortable when teaming up with Alcadon and APK.

Utility infrastructure on campsites is often old and would not pass certification anymore. This means that the utility infrastructure needs to be modernized/replaced.

Camping owners needing to modernize utility infrastructure can benefit from the Marva Parken case. Alcadon has a solution which is easy to install without having to move mobile homes and buildings.

- Our Multiduct cable protection/guidance systems can easily be installed between series of camping homes.
- These systems then connect to an Alcadon inspection chamber, from where utility infrastructure is distributed towards the camping houses.
- Water meters are installed in the inspection chambers, and electricity meters in a footway cabinet, next to the inspection chamber.
