

GOLD SUPPORT

Bundle and save. Discover the Gold difference.

Save up to €4.400 on selected Copper and Fiber testers for a limited time only.

Fluke Networks customers have always trusted us to provide them with the best certification testers available, renowned for their durability, accuracy, ease of use and reporting capabilities. And we've been doing this since 1992, by delivering accurate, fast, reliable, and easy-to-use cable certification testers into the hands of warranty providers, installers, and network technicians worldwide.

Our Versiv™ modular platform provides unique flexibility to test both copper and fiber and works with Linkware-PC, and Linkware™ Live, the industry's best reporting software – users have uploaded more than 100 million test results

to Linkware™ Live to prove it. We back this up with Gold Support, the most comprehensive support package available, delivering confidence and maintenance cost control in the same package. Join us in celebrating the 10th anniversary of our Versiv™/DSX platform with savings on our best-selling models, all including Gold Support, for a limited time only, from Sept 1st until Dec 15th, 2023.

Resolve and prevent your network issues today with Copper Testers from Fluke Networks.

Fluke Networks is the industry's most trusted partner for cable testing from Cat. 8 cabling that can support the transmission of data up to 40Gbps over balanced twisted-pair copper cabling.

The DSX CableAnalyzer™ cable testers provide accurate, error-free certification even in complex projects

where multiple teams are involved in the testing process, with varying media types and multiple testing requirements. The DSX is built on our Versiv™ modular design that supports copper certification, fiber optic loss, OTDR testing and fiber end-face inspection in one.

DSX-8000

Fluke Networks
CertiFiber Pro

Accelerate every step of your Fiber Certification with Fluke Networks.

Fibers have proven to be a cost-effective and reliable transmission medium, but they are susceptible to contamination and link damage. It can be time consuming and resource-intensive to narrow down the cause of failure. CertiFiber Pro provides you with an optical loss test set with the fastest time to certify.

Our ProjX™ management system ensures all jobs are completed correctly and efficiently and the optical loss test set provides automatic Pass/Fail analysis to industry standards or custom test limits. Both DSX and CertiFiber are compatible with Linkware™ Live cloud-based service and customers can quickly and easily create professional custom PDF reports with LinkWare™ PC.

Meet the challenges of enterprise fiber optic infrastructures with Optifiber Pro from Fluke Networks.

Using the same Versiv™ mainframe as DSX and Certifiber modules, Optifiber Pro is our user-friendly Optical Time Domain Reflectometer (OTDR). Optifiber pro is optimized for the enterprise, capable of testing both multimode and Singlemode optical fiber links for performance, for certification (with the Certifiber Pro) and for troubleshooting purposes.

A full 'Autotest mode, unique 'EventMap' display, and full-day battery life simplifies testing and delivers results to make every technician a near-expert.
